

Padlock Challenge

For this game you will need access to the internet!!!!!!!!!! Go to the PRONOM website and find the following clues!

Find the file format which has 20 different possible extensions including .cal? *Take down the second number of the PUID (the number starting with fmt).*

What version is the file format fmt/1820? *Take down the version number.*

How many different extensions is it possible for Synchronised Multimedia Integration Language to have? *Take down this number.*

Look at the file format signature (the signature is unique to each type of file format and is the information that helps verify what the file format is) for x-fmt/350 and the description try and see if you can work out what two digit number the letter E corresponds to! *Take down the two digit number.*

The first two answers added together are the first number, the third answer is the second number and the last two numbers are the two digit number of the fourth answer. Now you should have the padlock code!

For bonus points what is the encoding called in this signature where each letter is represented by two characters?
